Flexible
Supply

Cleaner
Fuel

Whether you're running a hotel, restaurant, pub or leisure club, there are two things that you just can't do without - an energy source to heat your property and an energy source to cook with. Why bother looking any further? Flogas LPG can heat your building and power your kitchen from one easy supply source:

Heating

Location is often everything when it comes to attracting guests to your business. It doesn't matter whether you're running a hotel, restaurant or golf club, a rural location can often give you the perfect setting. With an attractive rural position though often comes the draw back of being beyond the mains energy supply.

When you're not connected to the mains, there's only one fuel type that gives you all the benefits of mains gas – Liquefied Petroleum Gas (LPG).

- More environmentally friendly than oil and electricity
- Benefits of mains gas central heating
- Attractive Gas flame appliances
- Competitive pricing
- No responsibility for storage tanks
- Cost effective, easily integrated heating system
- Relatively low investment costs
- Quick payback on equipment

Catering

When you don't have access to a mains gas supply, it's important that you choose the right alternative. Unlike electricity, LPG from Flogas allows your kitchen staff to cook on a controllable gas flame, essential if you're serious about your food. LPG is the only fuel that allows this flexibility.

- Controllable gas flame for just the right heat
- Easy lighting system
- Clean burning and environmentally friendly fuel.

Added value

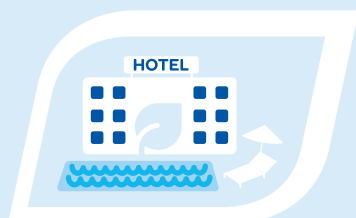

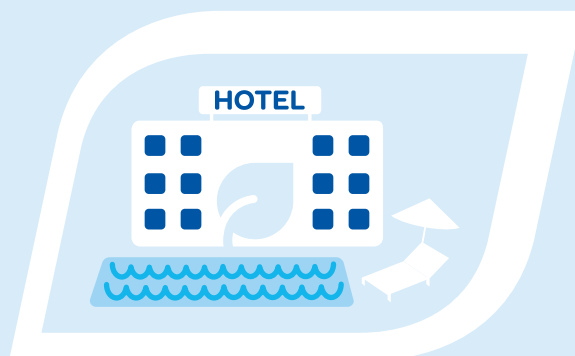

The flexibility of LPG means that it's perfect not only for central heating and catering, but also for any number of other uses:

- LPG is the perfect backup fuel in case of a power cut
- Can be used in conjunction with other alternative renewable energy
- Perfect fuel for the heating of swimming pools
- Ideal for powering golf buggies and fleet cars.
- Perfect for barbecues and patio heaters on the terrace.

LPG – an exceptional energy

	 LPG	 Oil	 Electricity

Controllable gas flame for cooking	✓		
No responsibility for storage tanks	✓		✓
Gas flame appliances	✓		
Clean burning flame	✓		✓
Environmentally friendly	✓		
Ideal back up fuel in case of power cuts	✓	✓	

Switch from oil to LPG and rest easy

If you're currently heating your property using oil central heating, fuel switching to LPG is a chance to make substantial savings in both CO₂ emissions and in costs.

Oil central heating can be noisy, emit fumes and is generally damaging to the environment. An LPG supply from Flogas has none of these problems and can also offer significant cost savings. Can you afford not to change?

LPG an exceptional energy

Due to a consistent gap between oil and LPG pricing, it is now becoming more viable and sustainable to change from an oil based energy supply to operate on LPG. The environmental benefits of LPG mean that this switch will produce a significant reduction in carbon output as well as impressive cost savings.

LPG - an environmental analysis

LPG has 3 physical properties that are particularly relevant to its carbon footprint:

1. In comparison to most hydrocarbons, LPG has a low carbon to hydrogen ratio which means that it will generate lower amounts of CO₂ per amount of heat produced.
2. It has a comparably high heating value, meaning it contains more energy per kg than most competing fuels.
3. According to the UN international panel on climate change (IPCC), LPG is not a greenhouse gas, meaning it is assigned a global warming potential (GWP) factor of 0. The IPCC lists the GWP actor of CO₂ as 1 (by definition as it is the equivalent measure of a carbon footprint) and methane as 25.

	 LPG	 Oil
Low carbon footprint	✓	
No fumes	✓	
Noise free	✓	
Hidden storage options	✓	
Lower maintenance costs	✓	
Cleaner burning fuel	✓	
Cheaper fuel costs	✓	
No customer responsibility for tank defects or spillages	✓	
Can be used as a hybrid back up fuel with renewable sources	✓

Flogas people are different

We talk in a more caring, down to earth manner, developing lasting relationships with our customers.

We're a people business, not a giant faceless corporation. Yet we are not small – anything but. Flogas is the second biggest name in LPG in the UK.

We don't shout about our achievements; we're more concerned about what we can do for our customers. Our staff are always there to help, proving as reliable as the LPG fuel itself.

To help you make the switch to LPG, ask us to come up with a turnkey solution based around your needs. We're not rigid in our thinking, so we'll develop a flexible approach, beginning with storage.

Storage options

If you're running a sizeable operation, the easiest, most cost effective option is a bulk supply.

We can install a bulk storage tank or tanks on your premises and train staff on its use. Our top-up service will then take the hassle out of ordering, as we calculate how much gas you're using and schedule deliveries accordingly.

And we certainly have the power to deliver, boasting more filling plants across the country than our major competitors combined. So we'll ensure you won't run out.

A great benefit over oil tanks, is that where

appropriate, LPG tanks can often be buried underground, leaving nothing but a small inspection hatch and unspoilt views.

We'll regularly test and maintain any tank, making certain that it is working efficiently and complying with safety regulations. For your peace of mind, we also have a 24-hour emergency team on call.

Depending on your needs, we can also supply you with cylinders. These can range from 47kg cylinders, which can be used for heating a swimming pool or for small catering operation, to 11kg cylinders perfect for outdoor heaters and barbecues.
